Introduction

This vignette describes related resources and materials useful for teaching statistics with a focus on modeling and computation.

1 Resources included with the `mosaic` package

The `mosaic` package includes a number of additional vignettes, including

Minimal R provides a minimal set of R commands for use in Intro Stats and discusses why it is important to keep the set of commands small

A Compendium of Commands to Teach Statistics using R describes the R commands needed for all the basic statistical procedures in an Intro Stats course;

Start Teaching Statistics Using R provides an introduction to R targeted at instructors of statistics courses and also discusses strategies for teaching statistics using R

Resampling in R discusses how to use R for resampling and bootstrapping in lower level statistics courses.

Start Modeling with R presents a strategy for teaching statistical modeling as a way of making sense of the world by building a representation that is easy to explore and manipulate.

Start R in Calculus describes how R can be used in calculus courses

2 Textbook-related resources

Statistical Modeling: A Fresh Approach, 2nd edition (D T Kaplan) is an introduction to statistics embracing a modeling approach and employing resampling methods. The `mosaic` package is used throughout. <http://www.mosaic-web.org/StatisticalModeling>.

Foundations and Applications of Statistics: An Introduction Using R (R Pruim) is an R-infused probability and mathematical statistics text that emphasizes connections between probability and statistics. The book predates the `mosaic` package, much of the code originally in the `fastR` package has been moved into the `mosaic` package. <http://www.ams.org/publications/authors/books/postpub/amstext-13>.

The Statistical Sleuth in R (N Horton) available at <http://www.amherst.edu/~nhorton/sleuth> describes how to undertake analyses in R for the examples in the first 13 chapters of the Second Edition of the *Statistical Sleuth: A Course in Methods of Data Analysis* (2002), the excellent text by Fred Ramsey and Dan Schafer.

Introduction to the Practice of Statistics in R (N Horton) available at <http://www.math.smith.edu/~nhorton/ips6e>, describes how to undertake analyses in R that are introduced as examples in the first chapters of the Sixth Edition of *Introduction to the Practice of Statistics* (2007), the excellent text by David Moore, George McCabe and Bruce Craig.

Statistics: Unlocking the Power of Data (Lock, Lock, Lock, Lock, and Lock) is a recent introductory statistics textbook that embraces a resampling approach. The `Lock5Data` package contains all of the data in the book. Additional information about the book and the approach used there can be found at <http://lock5stat.com>
